PROFESSIONAL SUMMARY

Dentist turned health informatics specialist with hands-on experience in EHR workflows, clinical research, and digital health evaluation. Skilled in SQL, Python, Tableau, and Power BI, with applied knowledge of REDCap, HIPAA, and HL7/FHIR standards to bridge healthcare delivery and technology and improve patient care through data-driven insights.

EXPERIENCE

Health Informatics Researcher - [TAI Lab - SHRS](#) | Pittsburgh, PA

Jan 2026 - Present

- Developed and managed REDCap data workflows for a two-clinic UPMC study comparing an AI computer-vision gait system (**VSTBalance**) against the stopwatch **4-Meter Walk Test**, capturing gait, balance, and postural-sway data to assess concurrent validity for fall-risk screening.
- Built a systematic evaluation of **389** medication-management apps (iOS/Android) via Python pipelines and coded **17** structured attributes, cleaned a multi-rater dataset, and surfaced adherence and digital-health trends for a peer-reviewed manuscript.
- Co-authored a manuscript evaluating **4** commercial non-wearable fall-detection devices (AltumView Sentinare 3, Pontosense Silver Shield, Aqara FP2, and Mercury Alert AI) for older adults and assisted in a **5-step**, 11-criterion scoring rubric across installation, app usability, and simulated-fall detection, scoring each on a 1–5 scale to benchmark devices on accuracy, false positives/negatives, and alert latency for safe home deployment.

Dental Assistant (Clinical Data & axiUm EHR) - [University of Pittsburgh](#) | Pittsburgh, PA

Oct 2024 – Jan 2026

- Queried, validated, and maintained patient records in the **axiUm EHR** through structured documentation reviews, strengthening data integrity and producing accurate, analysis-ready clinical data for reporting workflows.
- Managed end-to-end clinical documentation in the health record systems across **500+** patient encounters, ensuring complete, accurate, and **HIPAA-compliant** records at the point of care.
- Supported **15+** residents during diagnostic, preventive, and restorative procedures while capturing and entering clinical data and bridging hands-on patient care with accurate digital record-keeping.

Administrative Coordinator - [UPMC Infectious Diseases Department](#) | Pittsburgh, PA

Sept 2023 – Oct 2024

- Coordinated scheduling and clinical operations for **10+** providers in the Infectious Diseases department, acting as the liaison between clinical and administrative stakeholders while maintaining **IRB-aligned** documentation compliance.

SKILLS

- **Programming and Data Analysis:** SQL, R, Python, Excel (pivot tables, VLOOKUP), IBM-SPSS, Scikit-learn, SVM, Logistic Regression, Pandas, NumPy, Data Modeling
- **BI and Visualization:** Tableau, Power BI, Data Visualization, Orange (data-mining workflow), Dashboard Reporting
- **EHR and Standards:** REDCap, EHR systems (axiUm), HIPAA, ICD-10, ICH-GCP, IRB, HL7/FHIR
- **Core Competencies:** Data Pipelines, Predictive Modeling, Clinical Data Analysis, Data Quality Assurance, ETL, Data Governance

PROJECTS

[Evaluation and Usability Analysis of Mobile Dental Apps](#) | [UPITT \(Best Research Award – UPMC RI Day\)](#)

- Analyzed **694** dental apps from Google Play and App Store using a Python-based data extraction pipeline; shortlisted 21 based on MARS and IMS frameworks, with only **57%** meeting quality standards and quantified major gaps in personalization (28%) and provider communication (19%), highlighting usability improvement in mHealth apps.
- Ranked top-performing apps (Dental 3D Illustrations – MARS 4.45, Brush DJ – MARS 4.41) and proposed actionable strategies to boost engagement and patient-centered functionality.

[Blood Bank Database](#) | [University of Pittsburgh](#)

- Co-designed a normalized relational database in **SQL** for a blood-bank operations system spanning seven entities (donors, donations, blood products, staff, requests, transfers), defining primary/foreign-key relationships, business rules, and a full data dictionary to enforce referential integrity and end-to-end traceability from donation to transfusion.
- Built a **Power BI report** on the SQL data model — column and pie visuals breaking down donation volume by blood type, unit counts by product type, and staff activity — and wrote SQL reporting queries for per-hospital request-fulfillment rate and valid-vs-expired unit counts, giving the organization at-a-glance visibility into supply composition and demand.

EDUCATION

M.S. Health Informatics (STEM) - [University of Pittsburgh](#) (Aug 2023 - Apr 2025)

GPA: 3.98 /4.00

Bachelor of Dental Surgery - [Panineeya Institute of Dental Sciences](#) (Aug 2016 - Nov 2022)

GPA: 3.56/4.00

ACHIEVEMENTS & VOLUNTEER EXPERIENCE

Winner-Kuzneski Innovation Cup 2024 | [Trailyx Health](#) | [University of Pittsburgh](#)

- Co-pitched (Trailyx Health) an AI-powered **clinical trial documentation** platform, winning **\$6,000** at Kuzneski Innovation Cup 2024 for demonstrated innovation, scalability, and digital health impact.

Project ALL STAR | [Special Olympics](#) | [University of Pittsburgh](#)

- Collaborated with **Project ALL STAR** at the University of Pittsburgh, supporting **11** Special Olympics athletes in health-metric tracking using Fitbit devices and contributing to **CITI-certified** research data.
